TPO-TPH
AIR ACTUATED
CLUTCHES

#### **MAIN FEATURES**

TRANSFLUID air clutches are durable and reliable components. Their technical development has been achieved with years of experience in the field of transmissions.

With transmittable torques of up to 14000 Nm and being selfadjusting, they satisfy many different applications. Air actuation allows for easy engagement control and they can be remote controlled.

The main technical features are:

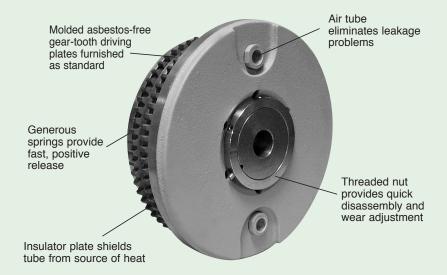

- Operating discs made of a high quality cast iron with large surfaces to dissipate heat generated from friction
- The friction discs are made of an asbestos-free composite compound that is molded with external gear teeth to interface with the internal teeth of the drive ring
- TPO clutches have compact external dimensions allowing easy installation
- The hubs have enlarged bore capacities to allow shafts with large diameters to be used
- The compact design allows two or three plate clutches to be used in the envelope where a single disc clutch typically would mount.

#### **Medium series**

The **TPO** clutches sizes **8**" and **10**" are manufactured with a vulcanized tube made with a nylon reinforced neoprene compound to eliminate leakage and provide a very long operational life. The medium series is interchangeable in components and dimensions with the corresponding *Twin Disc* production.

## **Heavy series**

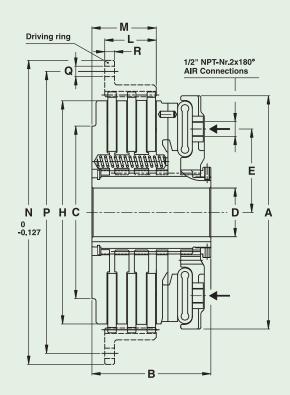

The core of 14" and 18" TPO clutch is an elastomeric diaphragm developed after in-depth research and development. This development resulted in a longest life diaphragm on the market. Because of the large air volume used to engage the heavy series of clutches they are supplied with an integrated quick release valve to provide rapid disconnect. The smaller clutches are typically not fitted with the quick release valve as long as the actuator is positioned near the TPO.

# **CLUTCH SELECTION GUIDE**

 The input power can be used to determine the torque limitation for the clutch:

 $T = 9550 \times kW / rpm$  Nm  $T = 7058 \times kW / rpm$  lbs-ft

 to the nominal transmitted torque, it is necessary to add a service factor "S" which depends upon prime mover and type of load:

 $T_{KN} > S \times T$ , where S factor is taken from table 3

# **TAB. 3 - SERVICE FACTOR S**

Prime	Drive	Driver equipment load classification								
mover	light load	mod.load	mid.load	heavy load						
AC electric motors	1	1.25	1.55	2.0						
Multi-cylinder engines	1.25	1.5	2.0	2.5						

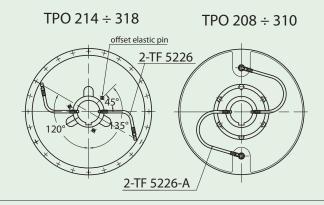

# **OPTIONAL ACCESSORIES**

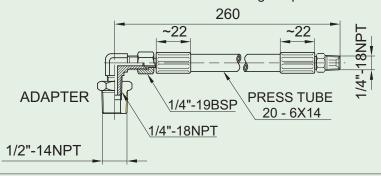

# ASSEMBLY WITH QUICK RELEASE VALVE (ONLY FOR TPO 214 - 318)

TF 6379-ER: R/H THREAD TF 6379-EL: L/H THREAD

# **APPLICATION EXAMPLES**

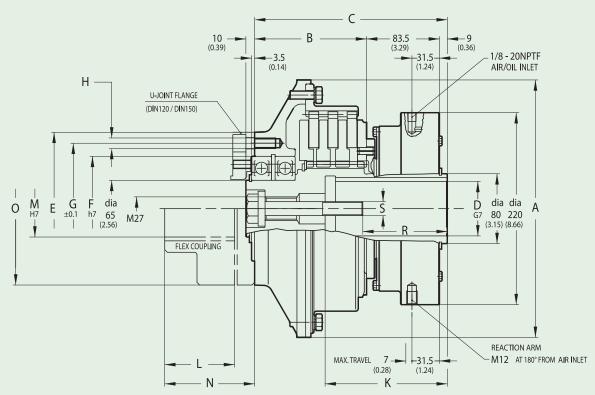

### **MAIN FEATURES**

The TPH model is designed for in-line drives and is based on the standard TPO clutch pack with a self-contained stationary thruster operating with 9 bar (130 Psi) air pressure.

The standard input for the TPH clutch is through the drive ring side by a flexible coupling or a universal joint flange. Typically

the output is fixed and supported by the driven equipment (pump, generator, reduction gear etc). If required the input and output can be reversed.

To simplify installation an air power-pack, 12 or 24 Vdc is available.
